Fax No. (347) 475-1540

## FORD

All Ford PCM (Powertrain Control Module), Ford ECM (Engine Control Module) & Ford ECU (Electronic Control Unit) from Flagship One, Inc. are precisely programmed and flashed to meet your vehicle's specific requirements.

### Passive Anti-Theft System (PATS)

*Type A*

If a vehicle is equipped with PATS, this procedure needs to be performed and a minimum of one key should be programmed to the replacement PCM in order for the vehicle to start. This procedure can be performed without visiting a Locksmith or Ford Dealership. If your vehicle does not have PATS then your programmed unit will be plug and play.

PICTURE SHOWN ARE FOR ILLUSTRATION  
PURPOSE ONLY. ACTUAL PRODUCT MAY VARY.

Important reminder: The vehicle's battery needs to be fully charged when performing the relearn. This process will take a total of 45 minutes.

Steps for the relearning procedure:

1. Use a transponder-chip key to turn the ignition ON position. Do not excessively turn all the way to crank the motor.
2. The vehicle's theft light should flash for approximately 15 minutes before it turns off.
3. Turn the transponder-chip key to the ignition OFF position for one second.
4. Repeat steps 1-3 twice more (a total of 3 times including the first attempt for a total of 45 minutes)
5. Attempt to start the engine. Once the engine starts and runs successfully, the relearn is complete.
