FORD

All Ford PCM (Powertrain Control Module), Ford ECM (Engine Control Module) & Ford ECU (Electronic Control Unit) from Flagship One, Inc. are precisely programmed and flashed to meet your vehicle's specific requirements.

Passive Anti-Theft System (PATS) Type D

If a vehicle is equipped with PATS, this procedure needs to be performed and a minimum of one key should be programmed to the replacement PCM in order for the vehicle to start. A *scan tool* is required to perform this procedure. This can be done by following the instructions below or choose to have it done by a Locksmith or Ford Dealer. If your vehicle does not have PATS then your programmed unit will be plug and play.

PICTURES SHOWN ARE FOR ILLUSTRATION
PURPOSES ONLY. ACTUAL PRODUCT MAY VARY.

Important reminder: The vehicle's battery needs to be fully charged when performing the relearn. **Two keys are required for this process.**

Steps for the relearning procedure:

1. Cycle the first key to RUN.
2. Select "Ignition Key Code Erase".
3. Disconnect the tool and leave the first key in the RUN position for 20 seconds.
4. Then cycle the first key to OFF position.
5. Repeat steps 1-4 using the second key.
6. Attempt to start the engine. Once the engine starts and runs successfully, the relearn is completed.
